Subject: Microsoft Settlement is BAD

The current Microsoft settlement is not just.
It perpetuates their monopoly. If you're in the software business
or information technology, you must be satisfied to "buy Microsoft"
or write add-on products that aren't too successful, otherwise
you're afraid for your job or business. The way things are going,
the only people who will get paid for writing (bad) software are
Microsoft employees ; everyone else, such as the Open Source advocates,
have to volunteer and write software for free.
